Spark Databox is known to be a pre-eminent platform for software certificate training and career development. Through our mission, we are a pioneer or positive change, improve productivity, increase the workforce, and creating a career opportunity for everyone. We are India's #1 software training institute. Apart from receiving excellent live training you will also receive free self-paced video courses, training materials, placement support, mock interviews and many more.

Program Key Features

- ❖ 100% Practical training
- ❖ Experienced Trainers
- ❖ 100% Placement assistance
- ❖ Small batch size
- ❖ Customized training content

- ❖ Real-time project training
- ❖ Fully equipped cloud lab
- ❖ 100% Customer support
- ❖ 100% Money back guarantee

About Course:

The best **Python online course** is here. Our expert trainers at Spark Databox are here ready to guide you and launch your career. The course at Spark Databox covers the basic and fundamental knowledge of Python Language. As we advance in the course, industry applications and uses are also taught along with the topics. Any learner new to programming can also benefit from this course as we teach from the basics and to advance based on the participants' experience. Post completion of the course the learner will gather expertise to build their own applications.

Contents

Section 1: Python Introduction

- Understanding the Open source
- Understanding Interpreters
- Introduction to Scripting languages
- Evolution of python
- Installation of python

Section 2: Getting started with Python

- Creating the first python program.
- Understanding the .py extension.
- How to run the PYTHON PROGRAM

Section 3: Python Scripts execution

- Using the python command line
- Using IDLE
- Using IDEs
- Using a regular command prompt

Section 4: Variables

Section 5: Various ways of printing

Section 6: Boolean functions

Section 7: Operators

- Arithmetic
- Relational
- Logical
- Assignment
- Membership
- Identity
- Unary

Section 8: Type casting

Section 9: Type casting

Section 10: Comments

Section 11: Strings and its types

- Single line
- Multi line
- Doc strings

Section 12: Accepting inputs

- Raw inputs and normal inputs

Section 13: Control Statements:

- Sequence control
- Decision control
- if-elif-else

Section 14: Loop control

- for
- while
- for-else

- while-else

Section 15: break, continue and pass keywords

Section 16: Indexing and slicing

Section 17: Special data types

Section 18: Lists

- What are lists?
- Mutable lists.
- In operator.
- Traversing a list.
- List operations.
- Converting a list to string.
- Converting a string to list.
- Aliasing in lists.
- Functions in lists.
- Range function

Section 19: Set

- Properties
- Various operations
- Casting
- Mathematical operations

Section 20: Tuples

- What is tuples?
- Indexing in tuples.
- Slicing in tuples.
- Immutable tuples.
- Lists and tuples.
- Functions in tuples.

Section 21: Dictionaries

- Keys and values.
- In operator.
- Looping in dictionaries.

- Lookups in dictionaries.
- Dictionaries and tuples.
- Functions in dictionaries.
- Single key with multiple values
- Dictionaries vs. sets.

Section 22: Functions

- Without arguments
- With normal arguments
- With positional arguments
- With named or keyword arguments
- With default arguments
- With variable length arguments
- With dictionary arguments
- Functions returning single and multiple values
- Pass by reference
- Pass by value
- Anonymous functions
- Understanding the doc strings
- Lambda, map, filters
- Understanding the return keyword
- Global scope.
- Local scope

Section 23: Modules

- What are modules?
- Understanding the namespaces
- Various ways of importing.
- Various ways of accessing
- Aliasing
- dir () function.
- Installation of a module.
- Properties of a module
- Understanding the virtualenv.

Section 24: Packages

- Packaging a module
- Understanding init file
- Establishing the relation between the modules and Packages

- Sub packages

Section 25: Files

- Reading and writing files
- Methods of File Objects
- Modes
- Reading
- Writing
- Modify
- Executing database queries using python scripts
- File creation in the default and specific locationsv read(),readline() and readlines()
- Merging
- Files similar schema
- Files different Schema
- Flip Kart Example
- Buffering in files.

Section 26: OOPS

- OOPS Paradigm
- Differences between Procedural and Object Oriented Programming
- OOPS Approaches
- OOPS Principles

Section 27: CLASSES AND OBJECTS

- Understanding the classes in python.
- Employee class
- Using the class statement
- Creating the objects for classes
- Methods in classes.
- Differences between the methods inside the class and outside the class
- self keyword

Section 28: Encapsulation

Section 29: Inheritance types

- Single
- Multilevel
- Hierarchical

- Multiple
- Hybrid
- Problems with multiple inheritances
- Understanding the super method

Section 30: Abstraction

- Abstract methods
- Abstract classes
- Decorative
- ABC module

Section 31: Installing predefined modules

Section 32: Working with excel files

Section 33: OS Commands

Section 34: Constructors

- Parameter less
- Parameterized
- Differences between the methods and constructors
- Advantages

Section 35: Destructors

Section 36: Garbage collectors

Section 37: Exceptions

- What are exceptions?
- Various types of exceptions.
- Exception handling - try,except,else,finally
- Displaying predefined and user defined messages
- Trapping errors.
- Raising exceptions.
- Customized exceptions

Section 38: Lambda, Map and Filter functions

Section 39: Command line arguments

Section 40: Database Connectivity

- What is database and its purpose?
- Types of databases
- What is a query?
- Working with oracle/MySQL databases.
- How to install MySQL-server and oracle?
- How to know what modules to install?
- Operations
- Creation of tables
- Insertion
- Data retrieval
- Updation
- Alterations
- Deletions

Section 41: Python and MySQL

- Connecting the python application with the database
- Cursors
- Running the queries
- Fetching the required amount of data and the complete data
- Loading the data from the database tables into excel file and text file

Section 42: MULTI THREADING

- Concurrent programming
- Creating and starting a thread
- Thread module
- Improving the performance using threading
- join() function
- Ways to implement threads
- Several methods of thread class
- Thread Synchronization
- Locking mechanism

Section 43: Introduction to web framework

- What is a server, HTTP Request and HTTP Response?
- What is a web framework and web application?
- Challenges in developing web application
- Django overview and installation
- Starting a Django powered project

Section 44: Django project architecture

Section 45: Understanding different .py

- manage.py
- settings.py
- _init_.py
- wsgi.py
- urls.py
- admin.py
- models.py
- views.py

Section 46: Starting your first web application

Section 47: Django project architecture

Section 48: Python regular expression

Section 49: Running Django development server

Section 50: Working with javascript & CSS files

Section 51: Templates

Section 52: Developing standard web template

Section 53: Developing standard web template

Section 54: Template tags

Section 55: Filters in Templates

Section 56: Template API

Section 57: Django Admin

- Activating the Admin interface
- Creating super use for Admin site
- Using the Admin site
- How to use the Admin site
- The django.contrib package

Section 58: Models

Section 59: The MVC Development Pattern

Section 60: Defining Models using Python classes

Section 61: Defining Model data fields

Section 62: Initializing model using make-migrations

Section 63: Running model initialization using migrate

Section 64: Registering models in settings.py

Section 65: Registering models with Admin site

Section 66: Views and URLconfs

Section 67: Understanding the view layer

Section 68: Requesting a web page via URL

Section 69: Rendering web page via view function

Section 70: Render HTTP Response to templates

Section 71: Understanding context data and python dictionary type

Section 72: Forms

- Form basics
- GET and Post methods
- Form validation
- Rendering forms
- ModelForm

Section 73: Working with static File

- Creating static repository
- Loading static files
- Adding Image file to Template
- Advance Models, Views, Forms and Admin

Section 74: Understanding model fields in depth, Database function, Model managers

- Django ORM
- Class based views
- File submission

Section 75: Real-time project

- Python project environment setup
- Real-time Python project
- Project demonstration
- Expert evaluation and feedback

You made it!!

Post completion of Python Online Course, a proper orientation for placements is done. With this training from experienced trainers, as professionals, you will be equipped with different proficiencies. This is a chance to open up and widen your prospects.

- Spark Databox Python course certification
- Interview preparation
- Mock interviews
- Resume preparation
- Knowledge sharing with industry experts
- Counseling to guide you to a right path in Python development career
